## HOW TO HAVE A SUCCESSFUL SYNCHRONISED AI PROGRAM

- Keep accurate calving, breeding, and pregnancy records.
- Ensure a suitable number of days postpartum in females.
- Animal identification should be clear and easily readable.
- Ensure herd health and disease prevention with a well designed prebreeding vaccination protocol. Vaccinate females a minimum of 30 days before the breeding season begins.
- Decide which estrus synchronisation protocol best fits your breeding program, facilities, and personnel.
- Ensure all products are purchased and on-hand prior to initiation of the protocol.
- Prepare the calendar of actions to ensure protocol compliance.
- Meticulously follow the estrus synchronisation protocol!
- If detecting estrus, spend as much time observing the animals as possible.
- Use estrous detection aids to facilitate visual observation of estrus.
- Use a properly trained technician for AI.
